

Question 1: How many entries are from applicants who applied for Fall 2026?

Fall 2026 applicant count: 16400

"SELECT count(*) FROM applicants WHERE term = 'Fall 2026';"

Inside the “applicants” data table, this query searches the “term” column and counts the number of rows that contain “Fall 2026”.

Question 2: Among entries that provide a nationality classification, what percentage are international students?

Percent international: 48.46%

"""

```
SELECT COUNT(*) FILTER (WHERE us_or_international = 'International') AS
international_count, COUNT(*) FILTER (
    WHERE us_or_international IS NOT NULL AND btrim(us_or_international) <> "
) AS classified_count
FROM applicants;
```

"""

Inside the “applicants” data table, this query searches the “us_or_international” column and counts the number of rows that contain “International”. It then counts how many rows in “us_or_international” were not Null. These values are used to find the percentage further down in the Python code.

Question 3: What are the average GPA, GRE Quantitative, GRE Verbal, and GRE Analytical Writing scores of applicants who provide each metric?

Average GPA: 3.76

Average GRE Quantitative: 267.10

Average GRE Verbal: 161.79

Average GRE Analytical Writing: 4.35

SELECT

```
ROUND(AVG(gpa)::numeric, 2) AS avg_gpa,  
ROUND(AVG(gre)::numeric, 2) AS avg_gre_q,  
ROUND(AVG(gre_v)::numeric, 2) AS avg_gre_v,  
ROUND(AVG(gre_aw)::numeric, 2) AS avg_gre_aw
```

FROM applicants;

Inside the “applicants” data table, for each of the four rows, “gpa”, “gre”, “gre_v”, and “gre_aw”, this query finds the average of the row values, then rounds the average to two decimal places.

Question 4: What is the average GPA of American applicants who applied for Fall 2026?

Average GPA (American, Fall 2026): 3.80

```
SELECT ROUND(AVG(gpa)::numeric, 2) AS avg_gpa_american_fall2026  
FROM applicants  
WHERE term = 'Fall 2026'  
AND us_or_international = 'American'  
AND gpa IS NOT NULL;
```

Inside the “applicants” data table, this query find the average of the “gpa” column for all rows where term=”Fall 2026” and where us_or_international=”American”. It excludes any rows where gpa=NULL.

Question 5: What percentage of Fall 2025 entries are acceptances?

Fall 2025 acceptance percentage: 40.05%

```
SELECT ROUND(  
  COUNT(*) FILTER (WHERE term = 'Fall 2025' AND status LIKE 'Accepted%%')::numeric  
  * 100.0  
  / NULLIF(COUNT(*) FILTER (WHERE term = 'Fall 2025'), 0),  
  2  
) AS fall_2025_acceptance_pct  
FROM applicants;  
*****
```

Inside the “applicants” data table, this query counts the rows that have status=“accepted” and term=“Fall 2025”. It then divides this number by the total number of applicants with term=“Fall 2025”.

Question 6: What is the average GPA of accepted applicants who applied for Fall 2026?

Average GPA (accepted, Fall 2026): 3.72

SELECT ROUND(AVG(gpa)::numeric, 2) AS avg_gpa_accepted_fall2026

FROM applicants

WHERE term = 'Fall 2025'

AND status LIKE 'Accepted%%'

AND gpa IS NOT NULL;

Inside the “applicants” data table, this query finds the average of the gpa column from all rows where term=”Fall 2025” and status=”Accepted” or similar. It excludes any rows where gpa=NULL.

Question 7: How many entries are from applicants who applied to Johns Hopkins University for a master's degree in Computer Science?

Johns Hopkins Masters Computer Science count: 14

```
SELECT count(*) AS jhu_ms_cs_count  
FROM applicants  
WHERE degree = 'Masters'  
AND program ILIKE '%computer science%'  
AND (program ILIKE '%hopkins%' OR program ILIKE '%jhu%');
```

Inside the “applicants” data table, this query counts the number of rows where degree=“Masters”, program=“computer science” or a similar value, and program=“Hopkins” or “jhu”.

Question 8: How many Fall 2026 entries are acceptances from applicants applying for a PhD in Computer Science at one of the following universities?

Georgetown University, Massachusetts Institute of Technology / MIT, Stanford University, Carnegie Mellon University

Applicants for PhD in Computer Science at the above schools: 29

```
SELECT count(*) AS q8_original_field_count
FROM applicants
WHERE term = 'Fall 2026'
AND status LIKE 'Accepted%'
AND degree = 'PhD'
AND program ILIKE '%computer science%'
AND (
  program ILIKE '%georgetown%'
OR program ILIKE '%stanford%'
OR program ILIKE '%massachusetts institute of technology%'
OR program ~* '\mmit\M'
OR program ILIKE '%carnegie mellon%'
OR program ~* '\mcmu\M'
);
```

Inside the “applicants” data table, this query counts how many rows have the following features:

Term=”fall 2026”

Status contains ”Accepted”

Degree=”PhD”

Program contains “computer science”

Program also contains one of the following: Georgetown, Stanford, Massachusetts institute of technology, mit, Carnegie mellon, mcmu

Question 9: Repeat question 8 but use the LLM generated fields.

Original-field count: 29

LLM-field count: 29

Difference: +0

```

SELECT count(*) AS q9_llm_field_count
FROM applicants
WHERE term = 'Fall 2026'
  AND status LIKE 'Accepted%'
  AND degree = 'PhD'
  AND llm_generated_program ILIKE '%computer science%'
  AND (
    llm_generated_university ILIKE '%georgetown%'
    OR llm_generated_university ILIKE '%stanford%'
    OR llm_generated_university ILIKE '%massachusetts institute of technology%'
    OR llm_generated_university ~* '\mmit\M'
    OR llm_generated_university ILIKE '%carnegie mellon%'
    OR llm_generated_university ~* '\mcmu\M'
  );

```

Inside the “applicants” data table, this query counts how many rows have the following features:

Term=“fall 2026”

Status contains “Accepted”

Degree=“PhD”

LLM_generated_program contains “computer science”

LLM_generated_university contains one of the following: Georgetown, Stanford, Massachusetts institute of technology, mit, Carnegie mellon, mcmu

Additional Question 1: What is the acceptance percentage for applicants that have the following GPAs: 0-0.9, 1-1.9, 2.0-2.9, 3.0-3.9, 4.0-4.9?

GPA 0-0.9: 85.71% (n=7)

GPA 1-1.9: 42.11% (n=19)

GPA 2.0-2.9: 53.96% (n=265)

GPA 3.0-3.9: 42.58% (n=19513)

GPA 4.0-4.9: 40.63% (n=3094)

SELECT CASE

WHEN gpa < 1 THEN '0-0.9'

WHEN gpa < 2 THEN '1-1.9'

WHEN gpa < 3 THEN '2.0-2.9'

WHEN gpa < 4 THEN '3.0-3.9'

ELSE '4.0-4.9'

END AS gpa_bucket,

count(*) AS total_in_bucket,

ROUND(

100.0 * count(*) FILTER (WHERE status LIKE '%Accepted%'):: numeric

/ NULLIF (count (*), 0),

2

) AS acceptance_pct

FROM applicants

WHERE gpa IS NOT NULL

GROUP BY 1

ORDER BY MIN(gpa);

Inside the “applicants” data table, this query runs a search for 4 specific cases for the row gpa. Based on the filter, it counts for each case how many rows have stat contains “Accepted” and divides it by the total number of rows to give a percentage.

Additional Question 2: How many applicants are there each term? Has the number been trending up or down?

Fall 2024: 81

Spring 2025: 154

Fall 2025: 23161

Spring 2026: 204

Fall 2026: 16400

Trending up

```
SELECT term,  
      count(*) AS applicant_count  
FROM applicants  
WHERE term IS NOT NULL  
GROUP BY term  
ORDER BY (regexp_match(term, '\d{4}'))[1]::int,  
      CASE  
        WHEN term LIKE '%Spring%' THEN 0  
        WHEN term LIKE '%Summer%' THEN 1  
        WHEN term LIKE '%Fall%' THEN 2  
        WHEN term LIKE '%Winter%' THEN 3  
        ELSE 4  
END;  
*****
```

Inside the “applicants” data table, this query counts how many applicants were in each value of the term column.
